Application description

- The application contains just 1 screen with a text field and a toggle button
  - The text field contains a logotype graphic and a static text with general terms and info. It should scroll on overflow.
  - Tapping the toggle button turns background tracking on/off.
    - On first tap the user should be asked to allow background tracking.
    - Tracking enabled is indicated in the statusbar.
- The application periodically sends collected data to a server datastore.
- UI language is English.
- The application is deployed to a selected number of beta testers with TestFlight.

DATA INNOVATION ARENA _

This application prototype is part of a concept being developed by NetPort Science Park in collaboration with Tourism in Blekinge. It tracks your background location in order to collect valuable data for the project partners.

Please keep tracking enabled as much as possible and only turn it off to conserve battery or to stop your location being tracked when you feel that you don't want to share that information for the moment.

Enable background tracking
